The esophagus represents one of the most stimulating challenges in modern medicine. The complexity of its diseases — from motility disorders to neoplasms, from inflammatory conditions to functional disorders — can no longer be addressed through a fragmented, single-speciality approach. Today, therapeutic success lies in the integration of expertise.

Esophagus Hub has been created as a center of educational excellence, specifically designed for clinicians with early to intermediate experience who wish to elevate their professional practice through a comprehensive 360-degree perspective.

The Big Picture: beyond the boundaries of a single specialty The distinctive value of this masterclass will be its multidisciplinary focus. You will not only learn what to do, but also understand why each clinical decision is made, by observing it from different perspectives:

- Clinical Synergy: learn how gastroenterology, minimally invasive surgery, and advanced diagnostics come together for superior results.
- Interaction with Experts: direct discussion with leading specialists in the field, facilitated by a strictly limited number of participants to ensure a highly personalized learning experience.
- From Theory to “Live” practice: sessions featuring complex clinical cases and live cases (or high-resolution procedural videos) demonstrate how multidisciplinary decision-making is translated into practical, technical, and surgical action.

Why participate?

The goal of Esophagus Hub is not only to impart knowledge, but to provide an understanding of methods. You will learn to see patients with esophageal disease not as a collection of symptoms, but as part of a pathway shared among specialists. Through the analysis of real-world scenarios and interactive discussion, you will transform your technical expertise into comprehensive clinical mastery, enabling you to confidently address every diagnostic and therapeutic challenge in the field of esophageal diseases.
